EVEN (either list performs similarly)	Emperor's Children (9), CSM (3), Tyrar

RECOMMENDATION & REASONING

IT'S CLOSE — and that's the honest headline. Prevalence-weighted, it's ~17 lean LIST B plus the 8 un-winnable Orks, and ~19 are EVEN (leaving a slight edge which argues for the 2nd Lancer — BUT the matchups that leans decisively

RECOMMENDATION: LIST A (2 Castellan / 1 Lancer), narrowly, for the 1st Lancer. 1) WORST-CASE MITIGATION. The A-favoured matchups (T'au, AdMech, etc.) are ones that TABLE a Knight army 0-VP. You LOSE games there. List B's strengths in matchups you can often still finesse on the MISSION.

2) THE MELEE MAJORITY IS BEATABLE WITHOUT THE 2ND BLADE. The Lancer's SHOOTING thins as well as a Lancer would, and the ELITE melee (Cuirassier + Navigator dome) + 1 Lancer counter-charging the key lane — not bad.

3) PILOT FIT. 'Dominate the shooting phase' is a cleaner, more repeatable strategy.

TAKE LIST B INSTEAD IF: you read your local LSO field as melee-dominated, or you value the counter-punch game, or you value the near-unkillable 2nd 4+ melee cluster — it just pays for it by losing the ranged wars that produce the most VP.

EITHER WAY: fix the list to a costed 2000 (add the 3 enhancements) — the difference between the two lists is small — pilot comfort is a legitimate tiebreaker.

Lancer (A) vs 1 Castellan/2 Lancer (B)

most-Dataslate)

Lancer (SHOOTING-DOMINANT) — Two Volcano lances win the shooting phase counter-charge/decapitation blade. Firepower-as-denial: delete their anti-Knight and both Castellans carry DOMINUS (so Dominus Foebreakers buffs TWO Knights).

Lancer (COUNTER-PUNCH) — Two 4++ full-invuln Lancers turn the no-melee-charge weakness — into a strength: two counter-charge blades + two assassins unkillable in combat. Price: HALF the long-range firepower (one Volcano, not two) vs the shooting meta forces.

3 shots S18 AP-5 D6+8 [Blast] = avg ~2 shots x ~11.5 = ~23 dmg into one (Raider/Shadowsword/Kataphron brick/Ironstrider/Defiler and splits over) + AP-4 D3 supercharge (~6.5 shots — shreds Terminators/elites, AP-4) + Mechanic 4+, Dev] — a TITANIC sniper (enemy Knights/superheavies), not an S ~1-2 extra priority targets PER TURN at range (bigger than first modelled — WINNING matchups).

STRIKE 5A WS2+ S20 AP-3 D8 [Lance] = ~4.2 hits, wounds <=T12 on 2s, ~3.7 deletes any single non-Titanic target (Defiler, Bloodthirster, Magnus-wound-down, Rick's core) + Shock Charge free Tank Shock (bonus MW). SWEEP 10A S10 AP-2 S a 4++-vs-ALL, W28, M14 body that survives the melee that kills a bare-3+ MELEE lane/turn + a 2nd assassin + a near-unkillable counter-puncher. Wins the

turn AT RANGE (dominates the shooting phase); List B survives + counter-charge the fight phase you can't tank). Which matters more = which half of the meta hurt most. Points are near-identical (~1825-1840 base each; Castellan escalates from Lancer/Armiger vs MFM).

hari (3), Votann (3), Astra Militarum (2), Salamanders (~3), Necrons Cursed-
ial Fists (target)

athwing (~3), Thousand Sons (3), Chaos Daemons Khorne (~2), Iron Hands
either way)

ids (3), Necrons C'tan (~2), SM mixed, Chaos Knights (1)

the field splits almost evenly: ~24 of 70 lean LIST A (the ranged-anti-tank half), led by the #1-tie Emperor's Children). The meta is ~57% melee-forward BY BODY, and the side are asymmetric.

See data-grounded reasons:

Ch, Astra Militarum, Votann = ~16% prevalence of pure ranged anti-tank) are the ones who surrender those ranged duels (one Volcano, not two) for a fight-phase edge in

The biggest melee chunks are hordes/chaff (EC Daemonettes, Ork Boyz) that Custodes/BA/DA you beat by OUT-OC-ing on the primary + screening the alpha unit by trying to win the fight phase outright.

It's a viable plan over a 6-round grind, and List A is the build you've practised.

Instant (lots of Custodes/BA/DA/Daemons/World Eaters), you're more comfortable + body as insurance against the melee alpha. List B's edge is REAL vs the elite - reduce your ugliest losses.

, lock PURGE THE FOE, and the Navigator dome is load-bearing in both. The gap is the real gap.

WINNERS' META — top-finishing lists, ~14 late-Ju

 so read them as 'what's winning', prevalence-weighted.

Note

#1-tie. Lord Exultant+Infractors, Daemonettes/Tormentors, Flawless Blades, Maulerfiends + Defiler pair (ectoplasma S12 AP-3). Kill Defilers at range OR counter-charge the swarm.

#2 (behind EC). ~100 Boyz + claws out-OC/tarpit; loss either way — 2nd Lancer sweep+4++ survives it marginally better.

Resurgent. Kataphron arc rifle (Anti-Veh 4+), Ironstrider lascannon, Skorpius ferrumite, Onager — massed anti-Knight guns. Out-shoot it.

Salamanders melta+Land Raiders (shoot=A); Iron Hands 10-Terminator hammer brick (counter-charge=B). Split.

Dominant T'au. Crisis Sunforge fusion + Broadside rail + 2 Riptide, markerlit 9" drop. Out-shoot + Navigator-dome the drop.

Cursed Legion = 18 Lokhust gauss cannons (shoot them=A); Awakened = C'tan+Wraith brick (OC race).

3 of 4 are Deathwing Knight melee bricks (counter-charge + assassinate Librarians = B); 1 Ravenwing (shoot=A).

~40 elite bodies. Lancer melee (S20 vs Custodes) + character assassination beat the brick; thin anti-Knight guns.

Death Company + Sanguinary Guard + Terminators, M12 + deep-strike charge. 2 counter-charge Lancers weather + punish the alpha.

Fragile — Volcano one-shots Raiders/Ravagers; shoot the Scourges/Venoms off. 2 Castellan removal shines.

Kill the Land Fortresses (rail) at range; out-shoot the plasma bricks; screen the Cthonian Beserk maul drop.

Vashtorr/Discordant assassination (Lancer=B) vs Defiler-spam (shoot=A). Balanced.

Magnus (T11 2+/4++) is the only Knight-killer — Lancer assassinates him; Rubrics can't punch Knights.
Lancer S20 kills monsters in melee; Volcano one-shots no-invuln Emissaries. Slight B.
Bloodcrusher Juggernaut cav + Bloodthirster — 2 Lancers counter-charge + duel the 'Thirster.
Superheavies + Shadowsword volcano + lascannon. A straight gun duel the 2-Castellan build is built for.
Marginal individually; spread across characters.

Why that list

Delete the Lokhust Destroyer gauss units at range (each removed = ~12 anti-Knight dmg gone). More guns = more removal.

It's an OC/points race either way. 2nd Castellán chips a C'tan faster; 2nd Lancer duels/pins one. Wash.

Concentrate-to-kill Monoliths needs the 2nd Volcano's damage; spreading feeds reanimation.

Shoot the Storm Speeder mark-engine + Black Knight packs; a Lancer can't catch M12 fall-back-and-shoot bikes.

Counter-charge the un-tableable 4++ bricks with a 2nd Lancer + assassinate the Termie Librarians; guns bounce off 2+/4+ +/-1Dmg.

Counter-charge the thunder-hammer brick; 4++ Lancer trades where a Castellán dies. (Not in the n=70 sample.)

TWO counter-charge blades vs the jump alpha — cover both drop lanes + double the assassin threat on Lemartes/Priests/Chaplains.

Lancer assassinates Magnus (the only real Knight-killer); a 2nd blade guarantees it. Otherwise the matchup is already favourable.

Counter-charge + assassinate casters throttles the MW; provisional (not deep-verified).

2nd Lancer doubles the Vashtorr/Discordant assassin threat; 2nd Castellán shoots the Defiler + killable chassis. Wash.

2 Castellan blast the Defiler pair (the real killer) off T1-2; 2 Lancer counter-charge the Infractor/Maulerfiend swarm AND hunt Defilers in melee. Genuinely balanced — the #1-tie matchup.

2 Castellan one-shot the fragile Raiders/Ravagers + gun the Scourges — removal-race shreds the paper army faster than a 2nd blade.

Lancer melee (S20 vs 2+/4++) + character assassination beat the elite brick where volume shooting only chips; the anti-Knight guns are thin, so you can afford to trade a Castellan.

Kill the Land Fortresses (rail) + plasma bricks at range; the guns clear the T6 Beserks wholesale. (1 Lancer still handles the maul drop.)

2nd Volcano one-shots no-invuln Emissaries; 2nd Lancer S20 kills monsters + assassinates a Norn. Slight B on the melee, slight A on the guns.

Same logic — out-shoot the rail/fusion/markerlight platforms.

Out-shoot the gunline — 2 Castellan delete an Ironstrider/Skorpius/Kataphron brick per turn. (B's Lancer-into-a-brick is viable but you win the removal race with guns.)

Shoot the tough hulls (Kill Rigs/Wazdakka/Stompa) — the Lancer can't out-clear fast dakka; more guns help.

Loss either way (accept it). 2nd Lancer sweep clears more Boyz + 4++ survives the inevitable tar-pit marginally better. Low decision weight.

Kill BOTH Land Raiders + the W2-3 bodies with volume — the shooting build out-guns the melta brick.

Mirror — trade gun-Knights (A) vs duel their War Dog/Lancer packs (B). Practice-dependent.

Pure ranged war. 2 Castellans out-gun the Crisis/Riptide/Broadside; a 2nd Lancer can't catch fire-and-fade T'au. Clear A.

2 Lancers counter-charge the Bloodcrusher cav + one duels the Bloodthirster (4++ trades). The cav out-runs a gunline read.

A straight firepower duel — 2x Volcano (S18) out-range/out-damage the superheavies. The matchup List A is built for.

2nd Lancer counter-charges the 10-model hammer brick (4++ survives the hammers a Castellans can't) + a 2nd assassin for Feirros/characters.

The LSO target: a firepower + mission race. 2nd Castellans strips the Sternguard/Land-Speeder enablers faster and breaks the Oath convergence — out-gun, out-mobile.

DATA-DRIVEN SIM — A vs B (my Knights' output computed from wh.mathhammer)
